Dash v0.13.0 Integration Notes:

1. DIP-002: Special Transactions are a foundational component of Dashcore v0.13.0 and introduce a new Transaction Version and related "Payload" to the network.

2. Integrated Systems must be able to serialize and deserialize these new Transaction Types in order to accurately encode and decode Raw Transaction data.

3. From a backwards compatibility perspective, the 4 byte (32-bit) "version" field included in Legacy Transactions has been split into two fields: "version" and "type" (each consisting of 2 bytes).

4. InstantSend status and Payload JSON (e.g. "proRegTx") is included in the JSON-RPC response, please note that this data is not part of the calculated hash and is provided for convenience.
